2. Citations and explanations

The international application relates to a device for receiving optical signals with a light guide.

D1 (DE-A-4 421 616), as the closest prior art, discloses with respect to the subject matter of claim 1 a device for receiving optical signals with a light guide into which the optical signal to be received can be coupled. By spontaneous emission fluorescent light is radiated at a higher wavelength than the original and is propagated in the longitudinal direction of the object (for example, an optical fibre) to a detector.

The remaining search report citations merely contain the general background art.

To enable in an arrangement of this kind extensively lossfree reception of optical signals with a large band width, according to claim 1 of the international application when light is impinged an optical signal of the same wave length is produced by elastic scattering, with a radiation component extending in the direction of the light guide.

None of the international search report citations individually or in combination discloses or suggests this subject matter. Novelty and inventive step are thus acknowledged.

This also applies to dependent claims 2 to 4 and dependent use claims 5 to 8.

VII. Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

To meet the requirements of PCT Rule 5.1(a)(ii), the description should cite D1 and D2 (EP-A-0 586 713) and give a brief outline of the relevant prior art therein.

To meet the requirements of PCT Rule 6.3(b), Claim 1 should be drafted in the two-part form.

The features of the claims are not provided with reference signs placed between parentheses (PCT Rule 6.2(b)).
